

A platform for tracking things and building their history.

### Asset History

Monitor every action & location of assets. Build complete history with custom details. Perform inspections on individual assets.

**Industry Examples:**

Rentals  
Office equipment  
Construction

### Traceability & Recall

Know where everything came from & went. Handles combinations & separations. Temporary & permanent combinations. Supports partial use of input items.

**Industry Examples:**

Food processing  
Agriculture  
Electronics  
Aerospace

### Inventory

Know exactly what you have in each location. Handles serialized items. See how long items were in locations. Relate items to their sources.

**Industry Examples:**

Manufacturing  
Logistics  
Building Supplies  
Foodservice

### Compliance Snapshots

Manage internal quality & safety compliance. Set up forms to capture location information. Tie snapshot results to item history. Includes approvals and comment trails.

**Industry Examples:**

Manufacturing  
Agriculture  
Foodservice  
Construction

### Label Design & Printing

Centralized label design & control. Print labels with dynamic information. Run from any browser; no software or drivers. Connect printers directly to the cloud.

**Industry Examples:**

Item identification  
Finished goods labels (GS1)  
Healthcare UDI Labelling  
Retail price, markdown tags

### Containers with Items

Actions on containers apply to contained items. Combine at multiple levels (e.g. components / boxes / pallets / containers). Empty containers to release contained items.

**Industry Examples:**

Manufacturing  
Supply chain logistics  
Construction  
Utilities

### Custom Attributes

Make your own data fields of different types. Tag fields to locations or items. Recorded data adds to item history. Data can update or modify previous values.

**Industry Examples:**

Manufacturing  
Rentals  
Field service  
Utilities

### Reporting

Custom-design your own reports and queries. Display results in lists, charts, and graphs. Base your queries on multiple factors. Turn data into meaningful information.

**Industry Examples:**

Process Manufacturing  
Logistics  
Foodservice  
Agriculture

### Assurance of Integrity

Record conditions at locations. Capture details about your items. Give proof that the right things were done. Include checklist results in item history.

**Industry Examples:**

Manufacturing, Logistics  
Agriculture, Retail

### Supplier Compliance

Set up supplier & receiving checklists. Trace issues back to the exact sources. Relate downstream problems to specific inputs.

**Industry Examples:**

Manufacturing  
Retail  
Foodservice

### Automation & Integration

Capture data from cloud-connected devices. Auto-update location & item parameters. Integrate data with other systems.

**Industry Examples:**

Manufacturing  
Logistics  
Agriculture
